METHOD, SYSTEM, AND ARTICLE OF MANUFACTURE FOR CONTROLLING CLIENT ACCESS

ABSTRACT

[0047] Provided are a method, system, and article of manufacture, wherein in certain embodiments a request is received to initiate a session. A determination is made whether the session should be initiated with addressing information provided by a client. The session is initiated with trusted addressing information corresponding to the client, in response to determining that the session should not be initiated with the addressing information provided by the client.
